VisionX AgentOS

Build AI agents for your repetitive work, with approvals, limits and a record of every run.

VisionX AgentOS is an enterprise AI agent platform. Teams configure agents, design workflows visually, run tasks with human approval steps, and monitor every run, under company and workspace permissions. Built for banks and enterprises that need control over what agents do.

Key modules

Agent Studio and playground

Configure and test agents with drafts, versions, publish and rollback.

- Configure and test agents with drafts, versions, publish and rollback.

Visual workflow builder

Design steps, branching and delays with durable checkpoints.

- Design steps, branching and delays with durable checkpoints.

Human approvals

Require separate-person approval before sensitive steps.

- Require separate-person approval before sensitive steps.

Run monitoring

Review run status and history and export records as CSV.

- Review run status and history and export records as CSV.

Templates

Deploy ready-made workflows and adapt them to your work.

- Deploy ready-made workflows and adapt them to your work.

Evaluations

Test agents before release and review evaluation results.

- Test agents before release and review evaluation results.

Describe it builder

Draft an agent or workflow from a plain description.

- Draft an agent or workflow from a plain description.

Model providers, budgets and usage

Use OpenAI and Anthropic models through the built-in gateway, with spend limits and usage reports.

- Use OpenAI and Anthropic models through the built-in gateway, with spend limits and usage reports.

Roles and workspaces

Company and workspace permissions with MFA.

- Company and workspace permissions with MFA.

Governance

Licence limits, retention controls, audit and backups of configuration and records.

- Licence limits, retention controls, audit and backups of configuration and records.

Top benefits

Configure agents and adapt ready-made workflow templates.

Test in the playground, review evaluations, publish versions and roll back when needed.

Apply separate-person approvals, company/workspace permissions and licence-enforced limits.

AI inside

- OpenAI and Anthropic models run through the built-in gateway, with spend limits and usage reports. Bring-your-own AI key is Planned, not supported today.
- Draft agents and workflows from a plain description
- Test agents before release and review results
- Separate-person approvals before sensitive workflow steps

Sensitive decisions stay under human approval.

Security & compliance

- Company isolation
- Company and workspace permissions
- MFA
- Separate-person approvals before sensitive steps
- Licence-enforced limits
- Audit and retention controls
- Backups of configuration and records
- SOC 2 audit in progress

Integrations

OpenAI models through the built-in gateway · Anthropic models through the built-in gateway

Limited

Scheduled runs and incoming webhooks (Limited) · Custom REST connectors and guarded HTTP tools with restricted outbound access (Limited)

Planned

Microsoft 365, Google Workspace, SAP and Oracle connectors (Planned) · Salesforce, ServiceNow, Jira, Slack and Teams connectors (Planned) · PostgreSQL and MCP server connectors (Planned) · Bring-your-own AI key (Planned) · SSO (Planned) · API access (Planned) · SIEM export (Planned) · Integration with VisionX KnowledgeOS (Planned) · Integration with VisionX Governance AI Shield (Planned)

Plans at a glance

Starter

Focused teams piloting repetitive work

- 10 users
- 1 workspace
- 5 agents
- 10 workflows
- 1,000 runs/month
- 2M AI tokens/month
- 90-day audit retention

$9,600 / year

Professional

Teams running more agents and workflows

- 50 users
- 5 workspaces
- 50 agents
- 100 workflows
- 25,000 runs/month
- 25M AI tokens/month
- 10 connectors — Limited custom REST access
- 20 schedules — Limited
- 20 webhook endpoints — Limited
- 365-day audit retention

$36,000 / year

Enterprise

Organizations with high run volumes and advanced governance

- Unlimited users
- Unlimited workspaces
- Unlimited agents
- Unlimited workflows
- 250,000 runs/month
- 7-year audit retention
- Advanced governance: licence limits, retention controls, audit and configuration/record backups

from $96,000 / year

Who it is for

Banking operations · Insurance claims · Finance and accounting · Customer support · HR operations · IT service desk

Plan your deployment

Choose a pilot workflow, sensitive approval steps, workspace permissions, run volumes and spend limits with our team. Scheduled runs, incoming webhooks and custom REST/HTTP connections are Limited; review restricted outbound access before deployment.
